Category/ Drug Class	Other Considerations
Autoimmune and Hepatitis C *	For some clients, an Indication Based Formulary will be utilized for products in these classes and may result in additional removals.
Drugs for infusion into spaces other than the blood	A drug which must be infused into a space other than the blood will generally not be covered under the prescription drug benefit.
Generics	Limited source generics may be evaluated when appropriate and potentially removed from the formulary.
Hyperinflation	On a quarterly basis, products with significant cost inflation that have clinically appropriate and more cost-effective alternatives may be evaluated and potentially removed from the formulary.
New-to-Market Agents ⁸	New-to-market products and new variations of products already in the marketplace will not be added to the formulary immediately. Each product will be evaluated for clinical appropriateness and cost-effectiveness. Recommended additions to the formulary will be presented to the CVS Caremark® National Pharmacy and Therapeutics Committee (or other appropriate reviewing body) for review and approval.
Specialty	As new specialty products launch, as well as quarterly throughout the year, CVS Caremark will re-evaluate existing specialty products to determine appropriate formulary placement, which includes potentially removing, adding back or deleting these products.

The listed formulary options are subject to change.
